**SILTECH**

*Siltech is celebrating its 20th anniversary with the introduction of the revolutionary next generation of cables. The first truly silent audio cables featuring X-balanced micro-technology.*

A Word From the President:

Siltech is truly appreciative of all the people - customers, distributors and reviewers alike - who helped to build the Siltech company to its present size. Your support brought the substantial growth needed to fund our costly and indispensable research. All this has cumulated in Siltech becoming a world-wide leader in the field of audio cables. Over the past 20 years the Siltech name has become synonymous with state-of-the-art performance and quality. Thus we have built a unique relationship with customers from all over the globe.

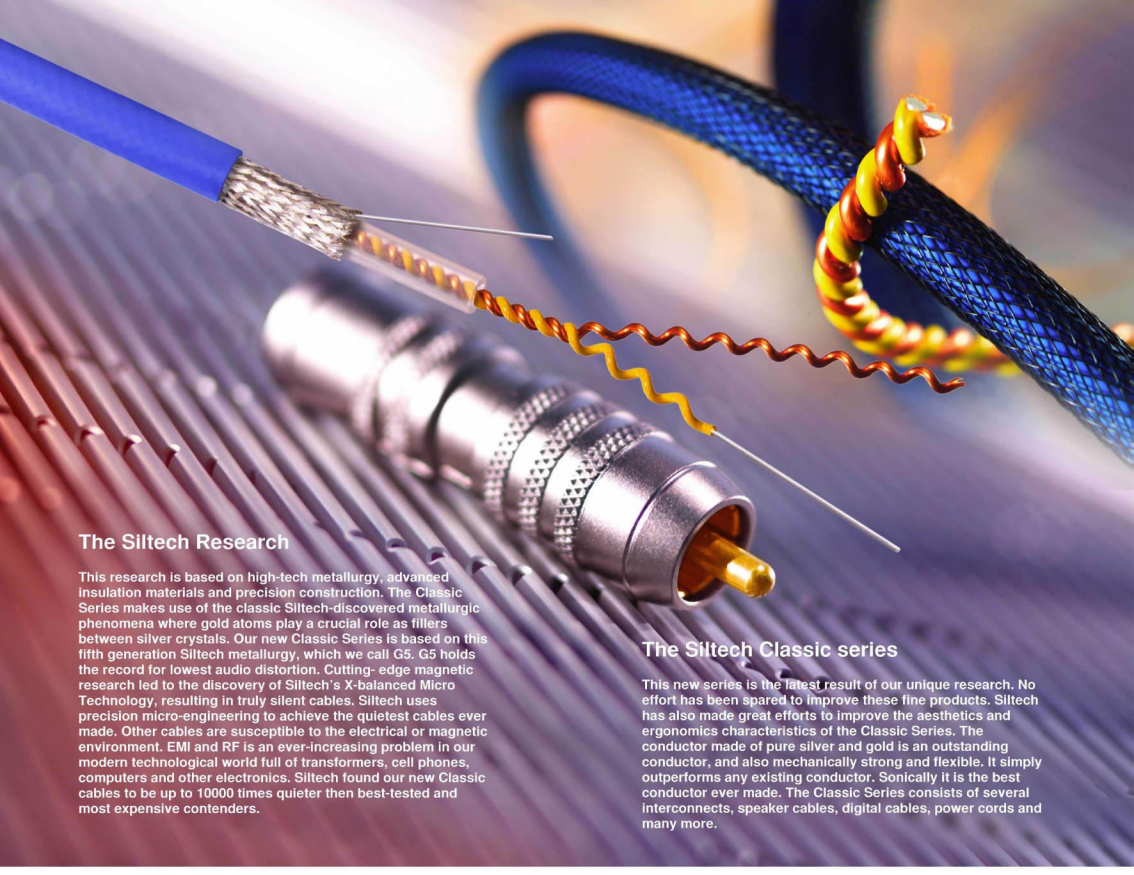

Thank you for your support.

*Yours truly,*  
Edwin van der Kley  
**President & Chief Executive Officer of Siltech**

**Siltech Classic Series**

**The Siltech Philosophy**

For 20 years, Siltech has been dedicated to the art of hand-crafting supremely refined audio cables, each designed and built to fulfill the individual needs and tastes of our music-loving customers. Every Siltech cable is a unique combination of State-of-the-Art technology and traditional hand-crafting skills. Built to provide a lifetime of musical pleasure. Warranted\* for life. So to put it simple: Our philosophy is to provide the world's best cables for both consumer and professional alike.

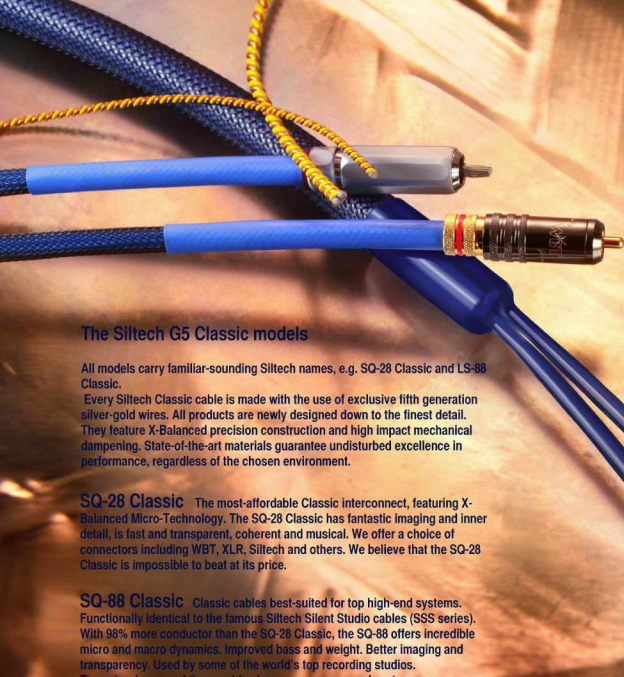

## The Siltech Research

This research is based on high-tech metallurgy, advanced insulation materials and precision construction. The Classic Series makes use of the classic Siltech-discovered metallurgic phenomena where gold atoms play a crucial role as fillers between silver crystals. Our new Classic Series is based on this fifth generation Siltech metallurgy, which we call G5. G5 holds the record for lowest audio distortion. Cutting-edge magnetic research led to the discovery of Siltech's X-balanced Micro Technology, resulting in truly silent cables. Siltech uses precision micro-engineering to achieve the quietest cables ever made. Other cables are susceptible to the electrical or magnetic environment. EMI and RF is an ever-increasing problem in our modern technological world full of transformers, cell phones, computers and other electronics. Siltech found our new Classic cables to be up to 10000 times quieter than best-tested and most expensive contenders.

## The Siltech Classic series

This new series is the latest result of our unique research. No effort has been spared to improve these fine products. Siltech has also made great efforts to improve the aesthetics and ergonomics characteristics of the Classic Series. The conductor made of pure silver and gold is an outstanding conductor, and also mechanically strong and flexible. It simply outperforms any existing conductor. Sonically it is the best conductor ever made. The Classic Series consists of several interconnects, speaker cables, digital cables, power cords and many more.

## The Siltech G5 Classic models

All models carry familiar-sounding Siltech names, e.g. SQ-28 Classic and LS-88 Classic.

Every Siltech Classic cable is made with the use of exclusive fifth generation silver-gold wires. All products are newly designed down to the finest detail. They feature X-Balanced precision construction and high impact mechanical dampening. State-of-the-art materials guarantee undisturbed excellence in performance, regardless of the chosen environment.

**SQ-28 Classic** The most-affordable Classic interconnect, featuring X-Balanced Micro-Technology. The SQ-28 Classic has fantastic imaging and inner detail, is fast and transparent, coherent and musical. We offer a choice of connectors including WBT, XLR, Siltech and others. We believe that the SQ-28 Classic is impossible to beat at its price.

**SQ-88 Classic** Classic cables best-suited for top high-end systems. Functionally identical to the famous Siltech Silent Studio cables (SSS series). With 98% more conductor than the SQ-28 Classic, the SQ-88 offers incredible micro and macro dynamics. Improved bass and weight. Better imaging and transparency. Used by some of the world's top recording studios. The natural power of these cables improves every sound system.

**SQ-110 Classic** For those who cannot do with less. With 100% more conductor than SQ-88 Classic, this is the most powerful Classic cable. This cable allows music to flow like never heard before. Signal to noise performance beats the competition by 250 to 10000 times. The new Classic cables surpass other brands in contrast, dynamics and realism, by a great margin. For the first time in audio cable history, many of these improvements can be measured and proven.

**LS-88 Classic** The perfect matching loudspeaker cable to the SQ-28 Classic interconnect.

The entry level Classic speaker cable that has X-Balanced Micro-Technology. The LS-88 Classic has fantastic imaging and inner detail, is fast and transparent, coherent and musical. Having all the virtues of the more expensive models, this is shockingly close to reality.

**LS-110 Classic** A very powerful Classic loudspeaker cable.

The full dynamics of the Classic series with a great sense of rhythm. With almost 100% more conductor than a LS-88 Classic, the LS-110 has even better micro and macro dynamics. Unlimited control, bass slam and weight. Precise imaging and an unrivaled transparency.

**LS-188 Classic** The most powerful Classic loudspeaker cable.

Demonstrating relentless power, dynamics and exemplary staging. Musicality and subtle detail is far beyond the competition.

**SPX-30 Classic** This power cord enhances an entire audio system with wider dynamics, improved rhythm and overall gains beyond expectation. The virtues of the X-Balanced technology with G5 guarantee almost no noise pick up of any kind. The SPX-30's lack of magnetic pulses results in a dramatically quieter and more dynamic system with improved imaging and transparency. The lack of leakage fields ensures purity throughout the full audio and video spectrum.

**HF-10 Classic** This new digital cable is derived directly from its famous Signature counterpart, the Golden Ridge. Being recognized as one of the few reference digital cables in the world, this Classic digital cable opens up new vistas, with never-before-heard improvements.

**CMP-10 Classic** Siltech's all-new cutting-edge technology Component cable takes advantage of the freedom from crosstalk, necessary to achieve the status of the best-performing component cable. This "multi" G5 X-Balanced Micro Technology cable sets new standards in performance.

## Siltech Classic Series Technical details

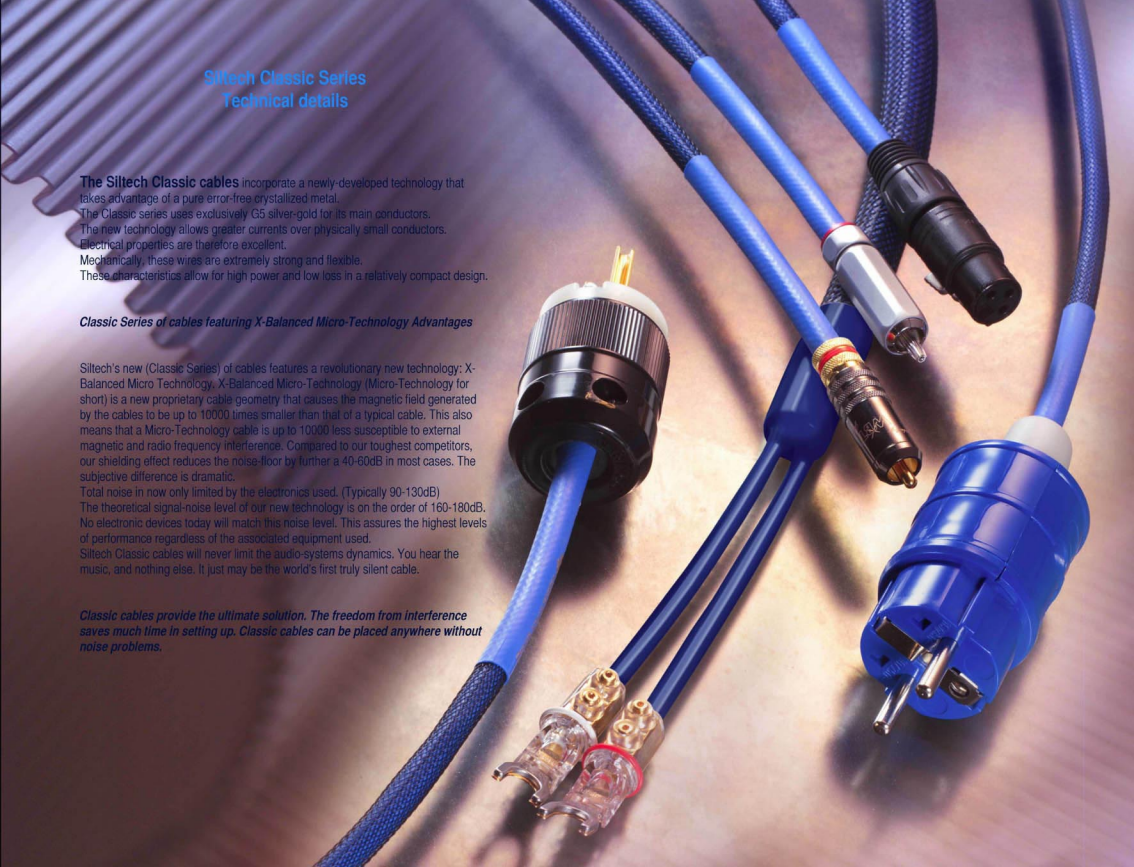

The Siltech Classic cables incorporate a newly-developed technology that takes advantage of a pure error-free crystallized metal. The Classic series uses exclusively G5 silver-gold for its main conductors. The new technology allows greater currents over physically small conductors. Electrical properties are therefore excellent. Mechanically, these wires are extremely strong and flexible. These characteristics allow for high power and low loss in a relatively compact design.

### *Classic Series of cables featuring X-Balanced Micro-Technology Advantages*

Siltech's new (Classic Series) of cables features a revolutionary new technology: X-Balanced Micro Technology. X-Balanced Micro-Technology (Micro-Technology for short) is a new proprietary cable geometry that causes the magnetic field generated by the cables to be up to 10000 times smaller than that of a typical cable. This also means that a Micro-Technology cable is up to 10000 less susceptible to external magnetic and radio frequency interference. Compared to our toughest competitors, our shielding effect reduces the noise-floor by further a 40-60dB in most cases. The subjective difference is dramatic.

Total noise is now only limited by the electronics used. (Typically 90-130dB)  
The theoretical signal-noise level of our new technology is on the order of 160-180dB. No electronic devices today will match this noise level. This assures the highest levels of performance regardless of the associated equipment used.  
Siltech Classic cables will never limit the audio-systems dynamics. You hear the music, and nothing else. It just may be the world's first truly silent cable.

*Classic cables provide the ultimate solution. The freedom from interference saves much time in setting up. Classic cables can be placed anywhere without noise problems.*

## Technical details

-Materials of choice-

Conductors: silver and gold  
Insulators: Siltech set Kapton™, Peek™ and Teflon™

-Characteristics of assembled cable-

Very strong and durable.  
Flexible.  
Ultra low distortion (new world record: less then one part per ten-million)  
high current capability  
high voltage capability  
very high power up to 8.000W  
low inductance  
low resistance  
low capacitance  
low dissipation factor  
ultra low noise (new world record)  
ultra low static noise  
ultra low magnetic sensitivity  
ultra low magnetic field  
extreme wide and linear frequency response without resonance  
free from microphonic effects  
not sensitive to LF, IF EMF  
easy to connect  
Warranty: Lifetime\*

\*Warranty  
covers manufacturing defects and excludes abuse. Original purchaser only
